DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

(e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371(c) of this title before the invention thereof by the applicant for patent.

The changes made to 35 U.S.C. 102(e) by the American Inventors Protection Act of 1999 (AIPA) and the Intellectual Property and High Technology Technical Amendments Act of 2002 do not apply when the reference is a U.S. patent resulting directly or indirectly from an international application filed before November 29, 2000. Therefore, the prior art date of the reference is determined under 35 U.S.C. 102(e) prior to the amendment by the AIPA (pre-AIPA 35 U.S.C. 102(e)).

2. Claims 1-3 are rejected under 35 U.S.C. 102(e) as being anticipated by Obermeyer et al. (US 2003/0143027).

Obermeyer et al. discloses an icebreaker comprising an expandable/shrinkable film body (see Fig. 13) which is disposed along a wall surface of the channel; a fixing member (19) for fixing the expandable/shrinkable film body to

the wall surface; and an air-supply means (24) for supplying air to between the expandable/shrinkable film body and the wall surface to inflate the expandable/shrinkable film body at the channel inner side. Further comprising a lower film body (see Fig. 12) provided in close contact with the wall surface, wherein the air-supplying means supplies air into between the expandable/shrinkable film body and the lower film body.

Re claim 3, a channel; a gate (see Fig. 101) for opening/closing the channel; and the ice breaker according to claim 1 disposed near the gate of the channel.
